

# Organic Chemistry Study Plan for the Barely Passing Student

Completed

- Ready to Work** 1) Accept the fact that if you want to improve your grade, it is going to be work. If you are ready, move on to step 2.
- Videos** 2) Watch the [full course review videos](#) UP TO THE POINT THAT YOUR LECTURE has made it to. If you are only at module 3, stop at module 3. Don't explore new territory yet, let's get you to understand the older stuff a little better first.
- Videos** 3) Once you have seen the [full course review videos](#) once, watch them again. Same deal, only go up to the point that your lecture has made it to.
- Practice Exams** 4) Go to the [practice exams](#), and start doing some of the easy ones. Take note of the areas that you are weak in.
- Flashcards** 5) Go to the [flashcards](#), and only do the 2-star and 3-star flashcards. You will probably get a lot of the 3-star ones wrong, but that is OK. It will give you a view of some other information, which might help you to learn the easier stuff. Again, take note of the areas that you are weak in.
- Tutorials** 6) Once you know what some of those weak spots are, go to the [tutorials](#) and start to read about the topics you are weak on.
- 1-pg Guides** 7) Print out all of the [one page guides](#), and tape them to your wall. That way, you can see them all of the time and have it sink in by osmosis.
- E-Books** 8) Last, if you have time, download the ["86 Tricks" e-book](#) and make sure you understand all of the 2-star and some of the 3-star tricks.
- Repeat** 9) Rinse and repeat.

**AceOrganicChem.com Elite**

You can't fight organic chemistry, but you can ace it.
